

Jan. 20, 2015

Model No.: BT-Adjustable Bed

RF Exposure Statement

1. Standard Applicable

According to EN 50371: 2002, if the average power emitted by apparatus operating in the frequency range 10 MHz – 300 GHz is less than or equal to 20 mW and the transmitting peak power is less than 20 W then the apparatus is deemed to comply with the basic restrictions without testing.

2. Measurement Result:

This a portable device and the max average output power is $-1.85 \text{ dBm} = (0.65 \text{ mW})$.

The antenna gain of the device is 1.50 dBi.

The EIRP of the device is $-1.85 + 1.50 = -0.45 \text{ dBm} = 0.90 \text{ mW}$

Lower than 20 mW

The SAR/MPE measurement is not necessary.
